Peacock Gold Tint

A tint for use with Permalac products

Intended Use(s):

Use with Permalac Clearcoats to create subtle colored effects, or a full gold finish.

Application:

For a light effect, mix 1:50.

For a darker effect, use 1:20.

For full gold coverage, use 1/8.

All effects will intensify with multiple coats. Best results with this tint will be achieved by spraying. Use an HVLP with a 1.2 ml tip and about 20 PSI.

Application steps:

- 1) First apply 1 coat of Permalac Clearcoat 20% with thinner. Allow this to dry for 15 minutes.
- 2) Then apply the tinted coats. Use light coats to prevent pigment migration. Apply tinted coats until the desired level of coverage is achieved.
- 3) Allow to dry for 15 minutes before applying a top coat of Permalac Clearcoat in the desired sheen.

Clean-Up:

Acetone or lacquer thinner will remove the tint.

Safety:

This product contains *xylene*. Use in a well-ventilated space.

Use a NIOSH or OSHA-rated respirator intended for organic solvents.

See the SDS for full safety information.
